

Introducing...

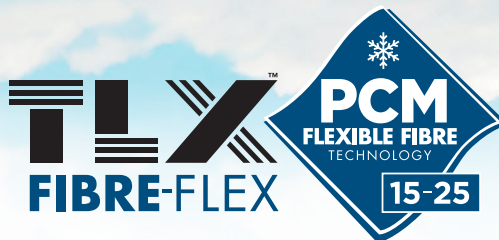

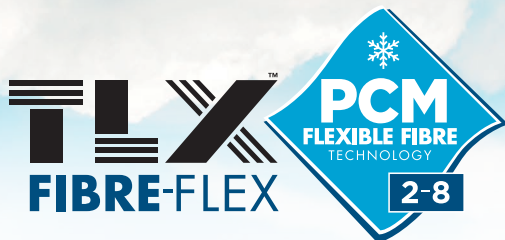

TLXTM
FIBRE-FLEX

FLEXIBLE PCM

for Cold Chain Transportation

TLX Cargo™ is part of TLX Insulation Ltd, the world leading manufacturer of thin reflective insulation. As industry leaders, we've been setting standards of excellence in high performance building insulation for nearly 25 years.

Our innovative technology has been applied to all kinds of projects ranging from the London 2012 Olympics to many historic and public buildings.

We've now used our years of experience to create TLX Fibre-Flex which contains unique PCM Flexible Fibre Technology. TLX Fibre-Flex is a system that can help to minimise heat build-up in cargo in the most hostile environments.

By encapsulating PCM within the physical structure of the material, TLX Fibre-Flex is able to remain flexible even when frozen, giving 360° protection to your valuable cargo.

TLX Fibre-Flex material is available in a variety of sizes. It's ultra-lightweight, thin and flexible making it ideal for protecting cargo of all shapes. It's also robust and waterproof and can be used over a substantial number of cycles.

TLX Fibre-Flex is available in two temperature ranges 2-8°C and 15-25°C so there's a product for optimum performance in most climates.

We are always at the end of the line if you need technical support. Just call our TLX Cargo™ hotline 01204 695 666.

WHAT MAKES PCM SO EFFECTIVE?

Phase Change Materials are ideal for thermal energy storage as they are highly cost effective, stable and environmentally friendly. PCMs are ideal for cold chain transportation/storage of temperature controlled packaging containing food and pharmaceuticals.

- Unique, non-leak PCM system
- Strong, flexible, easy to handle even when frozen
- Robust and waterproof
- Ideal for pharmaceutical, chemical, perishable and healthcare shipments
